

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application.

Listing of Claims:

1-40. (Cancelled)

41. (Previously Presented) A method for electronically and dynamically providing evaluation rules to evaluators to assist the evaluators in evaluating data items to which the evaluation rules apply, the method comprising the steps of:

- a) receiving a plurality of data items over a distributed computer network;
- b) storing a plurality of evaluation rules, each of the evaluation rules relating to a procedure for evaluation at least a particular one of the data items;
- c) selectively presenting the data item to an evaluator over a distributed computer network; and
- d) automatically selectively presenting to the evaluator the evaluation rules related to the data item presented to the evaluator over a distributed computer network.

42. (Currently Amended) The method of claim 41, wherein the step of presenting the data item and the step of presenting the ~~corresponding~~ evaluation rules that correspond to the data item are performed simultaneously.

43. (Currently Amended) A system for electronically and dynamically providing evaluation rules to evaluators to assist the evaluators in evaluating data items to which the evaluation rules apply, the system comprising:

- a) a receiving subsystem configured to receive a plurality of data items over a distributed computer network;
- b) a storing subsystem configured to store a plurality of evaluation rules, each of the evaluation rules relating to a procedure for evaluating at least a particular one of the data items;
- c) a presentation subsystem configured to selectively present the data item to an evaluator over a distributed computer network; and

d) a selection subsystem configured to automatically selectively present to the evaluator the evaluation rules related to the data item presented to the evaluator over a distributed computer network.

44. (Currently Amended) The system of claim 43, wherein the presenting the data items and the presenting the ~~corresponding~~-evaluation rules that correspond to the data items occur simultaneously.

45. (Previously Presented) A computer readable program storage medium tangibly embodying a data package and associated verification instructions executable by a computer system to electronically and dynamically providing evaluation rules to evaluators to assist the evaluators in evaluating data items to which the evaluation rules apply by performing steps including:

- a) receiving a plurality of data items over a distributed computer network;
- b) storing a plurality of evaluation rules, each of the evaluation rules relating to a procedure for evaluating at least a particular one of the data items;
- c) selectively presenting the data item to an evaluator over a distributed computer network; and
- d) automatically selectively presenting to the evaluator the evaluation rules related to the data item presented to the evaluator over a distributed computer network.

46. (Currently Amended) The computer readable program storage medium according to claim 45, wherein the presenting the data items and the presenting the ~~corresponding~~-evaluation rules that correspond to the data items occur simultaneously.
